

JOHN EBENEZER

Full-Stack Developer — AI & Automation Focus

johnebenezerxa@gmail.com | [Portfolio](#) | [LinkedIn](#) | [GitHub](#) | [LeetCode](#) | +91-9514013467

SUMMARY

Full-stack developer with hands-on experience shipping production web apps and AI-integrated tools (Gemini API, RAG, n8n). Comfortable across the stack from React/Next.js frontends to Node.js/PostgreSQL backends, with a growing focus on applying LLMs to real workflows. Hackathon finalist for an AI-based exam fraud detection system; solved 150+ DSA problems on LeetCode.

TECHNICAL SKILLS

- **Languages:** Java, JavaScript, Python, C++
- **Frontend:** React.js, Next.js, HTML5, CSS3, Tailwind CSS
- **Backend:** Node.js, Express.js, REST APIs
- **Databases:** MongoDB, PostgreSQL (Supabase)
- **Cloud & DevOps:** Docker, Git, GitHub, Vercel
- **AI & Automation:** Google Gemini API, RAG, n8n

EXPERIENCE

Web Developer Intern — Zippy Digital Solutions

Nov 2025 – Apr 2026

- Built an Electron-based offline-first desktop billing application as part of a 5-person dev team, currently in internal testing ahead of release.
- Stress-tested offline receipt printing and sync workflows - testing volume consumed 3+ full paper rolls in a single week.
- Designed local-first sync logic to reconcile offline transactions with the central database once connectivity is restored.
- Implemented secure local data storage and encrypted sync workflows, collaborating via Git/GitHub within the dev team.

PROJECTS

LeadVelox — Real-Time Lead Response Monitoring Platform [\[Github\]](#) [\[Live Demo\]](#)

Next.js · Supabase · PostgreSQL · Docker · n8n

- Built a SaaS platform that monitors 5-minute lead response SLAs via an automated cron checker, firing Slack escalation alerts within 60 seconds of a missed deadline.
- Implemented authentication and role-based access control across 3 user tiers (Admin/Manager/Agent) enforced with Supabase Row-Level Security, plus n8n webhook automation to ingest leads from website forms and Meta ads.
- Engineered atomic PostgreSQL-based rate limiting and duplicate detection to prevent race conditions and spam on incoming webhook traffic, deployed on Vercel.

DevGrasp — AI-Powered GitHub Repository Assistant [\[Github\]](#) [\[Live Demo\]](#)

React · Node.js · MongoDB · Gemini API

- Built an AI assistant that parses GitHub repositories and answers natural-language questions about the codebase using RAG; indexed 267 files across 5 repositories into 21,000+ embedded code chunks.
- Designed API endpoints for repository parsing and contextual code retrieval, chunking and embedding code with the Gemini API and MongoDB Atlas Vector Search for low-hallucination Q&A.
- Built a clean, responsive interface for exploring repository structure and chat history.

EDUCATION

B.Tech, Software Product Engineering (Kalvium) — Kalasalingam Academy of Research and Education

2024 – 2028 (Expected)

ACHIEVEMENTS

- Finalist at the national-level hackathon conducted by [IIT Palakkad](#) among the top 24 competing teams, for an **AI-powered examination fraud detection system** that flags suspicious candidate behavior during online assessments.
- Conducted an offline [n8n Workflow Automation Workshop](#) for **150+ students**, introducing workflow automation concepts and practical business process automation.
- Solved 150+ Data Structures & Algorithms problems on LeetCode.
